As a licensed ham since 1995 (a tech) I recently upgraded to Gen then Xtra. I think the basic restructuring is sound. The only thing I would like to see is that instead of 5wpm code test make it a 10-13wpm code test. I had trouble doing the code test 1 I am partially tone deaf. and 2. At 5wpm it was just a tad bit slow as I was used to copying @ 12-15wpm. I think if it bumped to 10-12wpm it would be a lot better. Thank you and may this issue be resolved post haste, as I know several people the only reason they haven't upgraded is because of the code test. Thank you Mark Timblin KI4CRA.
